The electron mobility is defined by the equation:  $\mu = \frac{v_d}{E}$ . where: E is the magnitude of the electric field applied to a material,  $v_d$  is the magnitude of the electron drift velocity (in other words, the electron drift speed) caused by the electric field, and

Proximity Sensors are available in models using high-frequency oscillation to detect ferrous and non-ferrous metal objects and in capacitive models to detect non-metal objects. Models are available with environment resistance, heat resistance, resistance to chemicals, and resistance to water.
