Anatomy (Greek anatomē, "dissection") is the branch of biology concerned with the study of the structure of organisms and their parts. Anatomy is a branch of natural science which deals with the structural organization of living things.

### **Anatomy - Wikipedia**

Anatomy and physiology are the opposite sides of the same biological coin. Anatomy is the study of the body's internal and external structures while physiology studies the function of those structures, both singularly and in conjunction with one another.

## **INTRODUCTION TO ANATOMY AND PHYSIOLOGY**

The circulatory system consists of the heart and blood vessels (arteries, veins and capillaries). The heart propels the circulation of the blood, which serves as a "transportation system" to transfer oxygen, fuel, nutrients, waste products, immune cells and signalling molecules (i.e., hormones) from one part of the body to another.
