Electronegativity, symbol  $\chi$ , is a chemical property that describes the tendency of an atom to attract a shared pair of electrons (or electron density) towards itself. An atom's electronegativity is affected by both its atomic number and the distance at which its valence electrons reside from the charged nucleus.

### **Electronegativity - Wikipedia**

Polar compounds are compounds that have slight charges (slightly positive and slightly negative) within the compound. The slight charges are due to electronegativity differences of .3 to 1.4.

### **What are polar and non-polar compounds? Give examples of**

Specimen 2018 Time allowed: 1 hour 45 minutes . Materials . For this paper you must have: € a ruler € a calculator € the periodic table (enclosed).

### **GCSE Chemistry Specimen question paper Paper 1**

Here we provide a set of questions which should be prepared for 1 and 2 marks answer type questions: Question numbers 1 and 2 in Section-A of Class 10 Science paper will be asked for one mark each.

### **CBSE 10th Science Exam 2019: Important questions and**

Chemistry Specimen Paper Class IX 2019 Onwards 3 Turn Over (c) Name the gas evolved in each of the following cases: (i) Copper carbonate is heated strongly.
