A fuel cell is an electrochemical cell that converts the chemical energy of a fuel (often hydrogen) and an oxidizing agent (often oxygen) into electricity through a pair of redox reactions. Fuel cells are different from most batteries in requiring a continuous source of fuel and oxygen (usually from air) to sustain the chemical reaction ...

Phase separation is a long-known physicochemical concept whereby a single phase system converts into at least two immiscible phases. However, the extent to which cells exploit phase separation in response to changes in the cellular environment and the cell cycle as a mechanism to create new and tailored functions has become apparent only in the ...
