Johannes Kepler (1571–1630) was the first to closely integrate the predictive geometrical astronomy, which had been dominant from Ptolemy in the 2nd century to Copernicus, with physical concepts to produce a New Astronomy, Based upon Causes, or Celestial Physics in 1609.

In 1964 John Bell showed how the 1935 "thought experiments" of Einstein, Podolsky, and Rosen could be made into real experiments. He put limits on local "hidden variables" that might restore a deterministic physics in the form of what he called an "inequality," the violation of which would confirm standard quantum mechanics.

### **John Stewart Bell - The Information Philosopher**

Albert Einstein's work on quantum mechanics is of major importance to information philosophy, because we depend on a limited indeterminism and an "adequate" or statistical determinism to explain the possibilities in an open future needed to create new information.

Students must obtain approval for their program of study and must see their faculty advisor at least once each year. The sample program of study chart shown is typical for the accredited major in Civil Engineering.
