The National Physical Laboratory (NPL) is the UK's National Measurement Institute and is a world-leading centre of excellence in developing and applying the most accurate measurement standards, science and technology.

Events - NPL

The Dimensional Metrology Group promotes health and growth of U.S. discrete-parts manufacturing by: providing access to world-class engineering resources; improving our services and widening the array of mechanisms for our customers to achieve high-accuracy dimensional measurements traceable to national and international standards.

Two-dimensional (2D) metal dichalcogenides like molybdenum disulfide (MoS₂) may provide a pathway to high-mobility channel materials that are needed for beyond-complementary metal-oxide-semiconductor (CMOS) devices. Controlling the thickness of these materials at the atomic level will be a key factor in the future development of MoS₂ devices.

A streak camera is an instrument for measuring the variation in a pulse of light's intensity with time. They are used to measure the pulse duration of some ultrafast laser systems and for applications such as time-resolved spectroscopy and LIDAR.

Measurement of Concentricity and Runout

Length measurement is implemented in practice in many ways. The most commonly used approaches are the transit-time methods and the interferometer methods based upon the speed of light.
