Free Fall and Acceleration of Gravity Objectives: 1. To know the meaning of free fall and the conditions under which it occurs. 2. To know the value for the acceleration of gravity (g) and to relate this value to velocity-time information. 3. To relate the motion of a free-falling object to the graphical descriptions of its motion. 4. To use equations to calculate how fast and how far a free ...

Gravity is measured by the acceleration that it gives to freely falling objects. At Earth's surface the acceleration of gravity is about 9.8 metres (32 feet) per second per second. Thus, for every second an object is in free fall, its speed increases by about 9.8 metres per second.

Determining the Acceleration Due to Gravity with a Simple

ACCELERATION DUE TO GRAVITY Skills you will learn or practice: Calculate velocity and acceleration from experimental measurements of x vs t (spark positions) Find average velocities from two positions and times, and average accelerations from two velocities and times Sketch $v(t)$ from the slope of $x(t)$ and $a(t)$ from the slope of $v(t)$ Extract physical constants from polynomial and linear fits to ...
