There is much interest in the claim that dysfunction of the mirror neuron system in individuals with autism spectrum condition causes difficulties in social interaction and communication.

Reflecting on the mirror neuron system in autism: A

All cutaneous sensory neurons can be classified as either A^δ, A^γ, or C based on their cell body sizes, axon diameter, degree of myelination and axonal conduction velocities. C-type sensory neurons are the smallest and most abundant, with unmyelinated axons and the slowest conduction velocities (ranging from 0.2–2 m/s).
