

urinary system and excretion pdf

The urinary system, also known as the renal system or urinary tract, consists of the kidneys, ureters, bladder, and the urethra. The purpose of the urinary system is to eliminate waste from the body, regulate blood volume and blood pressure, control levels of electrolytes and metabolites, and regulate blood pH.

Urinary system - Wikipedia

Results Mean estimated sodium and potassium urinary excretion were 4.93 g/day and 2.12 g/day, respectively. After a median follow-up of 8.2 years, 7884 (6.1%) participants had died or experienced a major cardiovascular event.

Joint association of urinary sodium and potassium

2-16. State the purpose of a closed urinary drainage system. 2-17. List the steps for collecting a sterile urine specimen from an indwelling catheter.

LESSON ASSIGNMENT LESSON 2 Nursing Care Related to the

The fractional excretion of sodium (FE Na) is the percentage of the sodium filtered by the kidney which is excreted in the urine. It is measured in terms of plasma and urine sodium, rather than by the interpretation of urinary sodium concentration alone, as urinary sodium concentrations can vary with water reabsorption.
